

New Product: Diamond-Impreg Sidetrack Bit

Problem:

“Old School” Natural Diamond Sidetrack Bits run to time-drill off a plug first are very slow in ROP and second they sometimes get wiped out in one run (especially in rubble zones) and cost the full bit price just for the one run. PDC Bits run in the same drilling tend to fracture the PDC cutters and have a short life.

Solution:

“New School” KX Sidetrack Bits have a cutter geometry like PDC bits (blade and cylinder cutters) but they are set with cylinder HPI (high pressure impreg) inserts that are tougher so they won't fracture. The KX drill faster than Diamond and don't fracture like PDC's, plus they can be refit so you only pay a small percentage of gross bit cost for one run.

**Currently Stocking 8 3/4", 8 1/2", 7 7/8", 6 1/8" and 4 3/4"
Domestic Rentals Available**
