

SXDS Burning Shoes are a thin-wall alternative to our full matrix XDS shoes. The unique fabrication method of the SXDS allows for wall thickness as little as .200" per side of the shoe head, which is impossible with a full matrix shoe.

Example used SXDS shoes after about 20 hours on bottom each.
Left: Burned over 1.688" motor/bridge plug debris/ and WC shoe junk.
Right: Burned over several plugs.
