

XDS Thru-Tubing Shoes

XDS Shoes are Matrix Head that is impregnated about 3/8" to 1/2" deep into the shoe face with diamond grit. The individual diamonds will do work until flat or fractured and then are sloughed out of the matrix which wears away to expose new grit.

XDS Shoes have been used in a wide range of targets with good results. With extremely low WOB and high RPM the XDS cuts with very low torque, so along with Extreme Targets like carbide, 13 chrome, incolloy, and case hard steels, it can cut through softer targets that require a light touch and very small particle size cuttings.
