

Industry Standard Bladed Carbide Insert Mills

Convex, Flat, Concave, Taper, and special function shapes.

Bladed (3,4,5,6) With carbide inserts in the leading edges (flat, round, hex, oct) and backed with carbide chips, Star-Bide, or other carbide shapes.

These mills are made by hand-held torch and that process requires the touch of a well experienced craftsman, so we do not perform the torch work ourselves, but rely on an expert third party who are experts.
